

Organic Rice Protein for pet food

The product

Rice protein derives from the wet milling process of rice starch products. It has a balanced amino acid profile, it is very rich in glutamine, leucine and arginine, has a good content of cysteine and methionine and does not contain any nutritional factor.

This protein source is highly digestible and has a high level of easy-accessible energy, therefore it can be a great solutions for the diets of puppies and kittens and for hypoallergenic formulations. It can be a good substitute of fish meal, soybean meal, blood meal or whey powder in animal nutrition. In our portfolio we can offer NON-GMO rice protein, either with 50% or 65% crude protein. Being organic-certified, our rice protein products are a sustainable protein source good both for the animals and for the environment.
