

NATURAL PET CARE

FOR PETS' SKIN HEALTH AND COAT

A matrix of natural
collagen and other key
biomolecules

Ovopet® is naturally comprised by the three
key biomolecules for a healthy skin and shiny
coat. Due to the synergy between them
Ovopet® offers an overall approach for skin.

ELASTIN

It confers the skin a
unique physiological
elasticity.

COLLAGEN

The plentiful protein in
pets' body that provides
structure to the skin. It
boosts collagen, elastin
and HA **endogenous**
production.

HYALURONIC ACID

The key molecule involved
in skin moisture that has
unique capacity in retaining
water. It keeps skin
hydrated and lubricated.
It also restores the
metabolism
of fibroblasts.

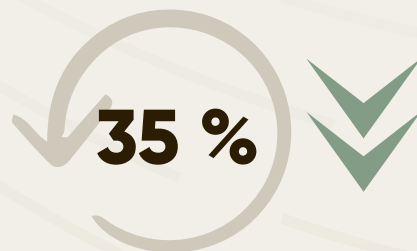

CLINICALLY PROVEN FOR SKIN HEALTH AND COAT APPEARANCE

The skin is the largest organ in your pet's body and performs several vital functions. It provides a protective barrier against the environment and external pathogens, regulates temperature, and reduces water loss. Maintaining a healthy skin is therefore quite important for your pet's overall health.

RESTORES SKIN BARRIER FUNCTION

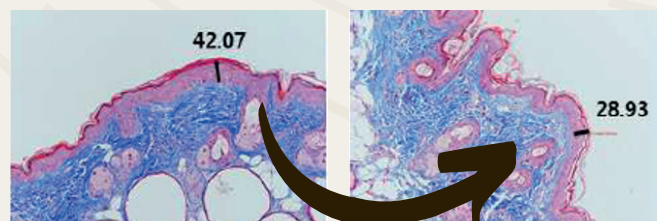

Clinically proven to decrease trans epidermal water loss which shows an enhanced barrier function that avoids at the same time the entrance of harmful substances.

TEWL
decrease
vs. placebo

REDUCES SKIN INFLAMMATION

Ovopet® reduces both pro-inflammatory cytokines in blood and the thickness of the damaged epidermis.

Damaged skin

Inflammation decrease
vs. placebo

BOOSTS SKIN HYDRATION

Ovopet® stimulates the synthesis of hyaluronic acid which is the key biomolecule to retain water. This, together with the restore of the barrier function, keeps a hydrated skin.
